How to take care of your Paul Rogers product

Veneer legs

The wooden legs of this table are finished with special wood veneer. As wood is a natural material, variations in colour, grain and texture are normal and contribute to the unique appearance of each table.

For best performance, use the table indoors in a **dry and stable environment**. Avoid strong fluctuations in temperature and humidity. A room temperature of at least 18°C and a relative humidity of approximately 50–60% are recommended.

Avoid prolonged contact with water or other liquids. **Wipe up spills immediately** with a soft, absorbent cloth. Do not use excessive water, steam cleaners, abrasive sponges or aggressive cleaning products.

For regular cleaning, use a soft, dry or slightly damp cloth.

Protect the wooden surfaces from scratches, impacts, excessive heat and prolonged direct sunlight. Because the surface is made from real wood, natural colour changes may occur over time, particularly through exposure to light.

Natural variations and changes caused by humidity, temperature, sunlight, normal ageing or improper care are inherent to real wood and are **not considered manufacturing defects**.

Additional info can be found in the technical files of the products on our website.
